

Hopi Jr & Sr High School Temporary Water System *Design Build*

FE served as the Design Builder on this project providing a temporary water system to by-pass the existing elevated storage tank, which needed to be removed from service and repaired. Included with the installation were three 10,000-gallon storage tanks and two booster pumps equipped with variable frequency drives to maintain a steady pressure under variable demands, including fire protection.

Owner: Hopi Jr/Sr High School
Role: Design Builder
Contract Amount: \$76,030
Final Contract Amount: \$76,030
Project Start Date: March 2009
Project Completion Date: Aug 2009

Fann Environmental Key Personnel:

Mike Young - Project Manager
