

Sedona WWRF Long Term Effluent General Contractor

The FE Team served as the general contractor on this project, which consisted of the construction of an effluent booster station, upgrades to the effluent system surge tank, inter-connective piping to the existing effluent disposal system, construction of a 40 acre irrigation effluent disposal area, and upgrades to the existing effluent disposal wet lands.

The booster station included a cast-in-place concrete wet well, vertical turbine pumps and associated electrical and controls.
